

Join our next provincial TYPED LIVE CHAT!

The Provincial Behavioural Supports Ontario Lived Experience Advisory invites you to join us along with special guest Dr. Sara Mitchell, Assistant Professor, Division of Neurology, Department of Medicine at Sunnybrook Health Sciences Centre for a TYPED LIVE CHAT discussion. Come prepared to share your insight and lived experience regarding hospital (or "acute") care when living or supporting someone with cognitive impairment.

Share your feedback!

Hospitals are a busy place and it can be difficult to provide personalized care for someone living with cognitive impairment when they are unable to communicate their needs.

1. What are the elements that make a hospital (acute) care experience positive for an older adult living with cognitive impairment and their family care partner?
2. What barriers exist to providing excellent care in an acute hospital setting for patients with cognitive impairment and their family care partners?
3. What could be done to improve the environment and care for patients and their family care partners?

When: Wednesday, October 18, 2017, 7:00pm - 8:30pm

Where: On the Dementia Crossroads Lived Experience Café
website: <http://dementiacrossroads.ca/chat.php>
